Symptom (public)

Terminal emulator is capable of 132-column mode but RE/cos doesn't use this.

Problem (public)

Solution (public)

To use 132 column mode, first define a device type as follows:

- d ^resetup
- Devices\Copy to copy from DEFAULT to DEF132
- Devices\Add/Modify to change attributes of DEF132. Make the width 132. Add the following to the end of the Initialization escape sequence:

,27,91,63,51,104

(You could set the Termination sequence to *27,91,63,51,104 but the software doesn't actually use this when you exit from it, so the terminal emulator will be left in 132-column mode)

- Terminals\Add/Modify to change SYSTEM entry so it uses DEF132 device type instead of DEFAULT one.
